

ABSTRACT OF THE DISCLOSURE

In the presentation system in which images are to be presented to audience during a presentation by a speaker according to image display commands issued by the speaker, a receiving side apparatus stores the image files received from a transmitting side apparatus operated by the speaker, monitors a state of storing the image files in the storage device, and changes at least a part of storing states of the image files stored in the storage device, when it is detected that storing of one image file that is currently received or scheduled to be received from the transmitting side apparatus is impossible, so as to make the storing of the one image file into the storing device possible.
